

Optimize your Sterilizer or Autoclave's Design with a Multi-Valve Manifold

In applications needing to mix water, air or gases, consider replacing multiple solenoid valves with a single manifold to reduce complexity and eliminate multiple leak points.

Replacing multiple valve bodies with a single precision-machined manifold will:

- Save space & cost in multi-valve applications.
- Reduce leak points
- Provide a convenient "Plug & Play" system
- Eliminate need for redundant piping and fittings
- Reduce labor costs

This two station manifold assembly is controlled by 2 "7-series" valves.

To learn more about improving your design with a multi-valve manifold solution, contact our Technical Sales Representatives at 814-838-3190

Solenoid Solutions offers a wide range of Wattmizer solenoid valves designed specifically for use in Sterilizers and Autoclaves

- Buy direct from the manufacturer
- Free engineering services
- Fast Prototypes
- Most response sales and service in the industry
- Made in the USA

7 Series Valves

Anodized Aluminum Body with stainless steel internal parts – compatible with common media including air, inert gases, hydraulic fluids, petroleum products, in a 2-way normally closed configuration.

Super Wattmizers
